

## Color to BW

This is a collection of four actions, three of which are used in converting color images to b/w, and one of which is useful for monitor calibration. Included are:

- BW Calculations Like: Renders results like the Calculations dialog, only more flexible and easier to use.
- BW Swiss Army Knife: Greg Gorman, Maurice Hamilton, Russell Brown and KentC methods rolled into one action.
- BW Kloskowski Variations: Who knew you could use Variations to make a BW?
- BW Step Wedge: A tool for creating 4, 10 or 11 segment step wedges. Handy for monitor calibration.

The readme step in each fully explains what they do and how to use them. The three conversion actions have lots of customization options, and I took advantage of some of them in the demonstration image made with the BW Swiss Army Knife. I suspect this is going to be the core of many of your conversion efforts. Test on PS7+.
