

Filer's Frame Action

This action creates a white frame with a drop shadow and rounded corners. After duplicating the image, it offers a downsizing option, rounds the image corners and places it on an enlarged white background.

It will run on any size image, but the corner radius proportions using an image about 600 pixels wide for web work. Settings can be changed in the "smooth" steps.

After inputting any preference changes, the dialogs can be turned off so the action will run without stopping for user input. The resizing steps can also be turned off.
